

# Product Range

**Building together**

We focus on collaboration and good ideas that deliver significant savings.

On the following pages, we would like to give you an overview of our product lines and product groups.

Our range comprises over 28'000 items and is constantly being expanded so that you can always benefit from innovative products and smart solutions.

New products, all of which have undergone long-term development, are added weekly.

Chiara and Martin Tobler

**Your success is our mission**

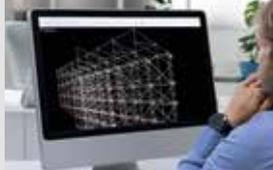

Our customers and their success are at the heart of our collaborative efforts.

We are your trusted partner for all matters related to scaffolding and formworking, and we develop customer-specific solutions – from planning through engineering to production.

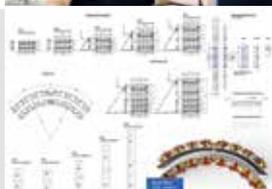

As an innovative full-service provider, we think ahead. We continue to bring our vision of efficient, flexible and safe construction to the industry. With our products you can rely on excellent functionality and the highest production quality.

# Scaffolding Systems

### **MATO 1 – The fastest Facade Scaffolding**

MATO 1 is a DIBt-certified lightweight scaffolding system developed for maximum speed and maximum safety.

In addition to light, stable scaffolding frames and excellent platforms and toe boards, the system is characterised by a striking double guardrail. It can be hooked into the frame in seconds and expedites straight alignment of the scaffolding.

Switzerland's market-leading system features a particularly low weight and a very small transport volume.

Time savings of up to 30% are possible compared to other established products and make the system extremely economical.

**MATO 1**  
Facade scaffolding.

### **MATO 2 – Built-in Flexibility**

The established and very popular MATO2 light-weight scaffolding system provides a particularly high degree of flexibility. MATO2 shows its greatest strength in complex buildings and angled floor plans.

The core of the DIBt-certified system consists of rosette connectors that are vertically spaced at 50cm intervals. This allows for axial connections in four directions.

This facade scaffolding with a modular scaffold function has been expanded and optimised over the years and is a pleasure to use, especially for roofers and plumbers.

Whether facade or roof, old building or new: MATO2 is compact, lightweight and flexible – all of which makes set-up up to 30% faster than other established systems on the market.

**MATO 2**  
Facade scaffolding.

### Compatible Systeme and Deckings

Our engineers and scaffolding specialists are quite keen to find solutions to problems for customers who have purchased scaffolding systems from other manufacturers.

Over the years, this has resulted in the Tobler "Compatible Systems" product range. Here, the scaffolder receives components from Tobler that are fully compatible with his standard system but bring in several advantages.

With this business model, one benefits from outstanding design ("Swiss Engineering"), rapid availability and top-quality. Tobler solutions are lighter, easier to handle or meet the require-

ments of a higher load class and outperform the original components in terms of bending strength and torsional rigidity.

Last but not least, we offer you particularly attractive conditions at certain times.

Register to make sure you don't miss out!

### Enjoyment of Industrial Construction

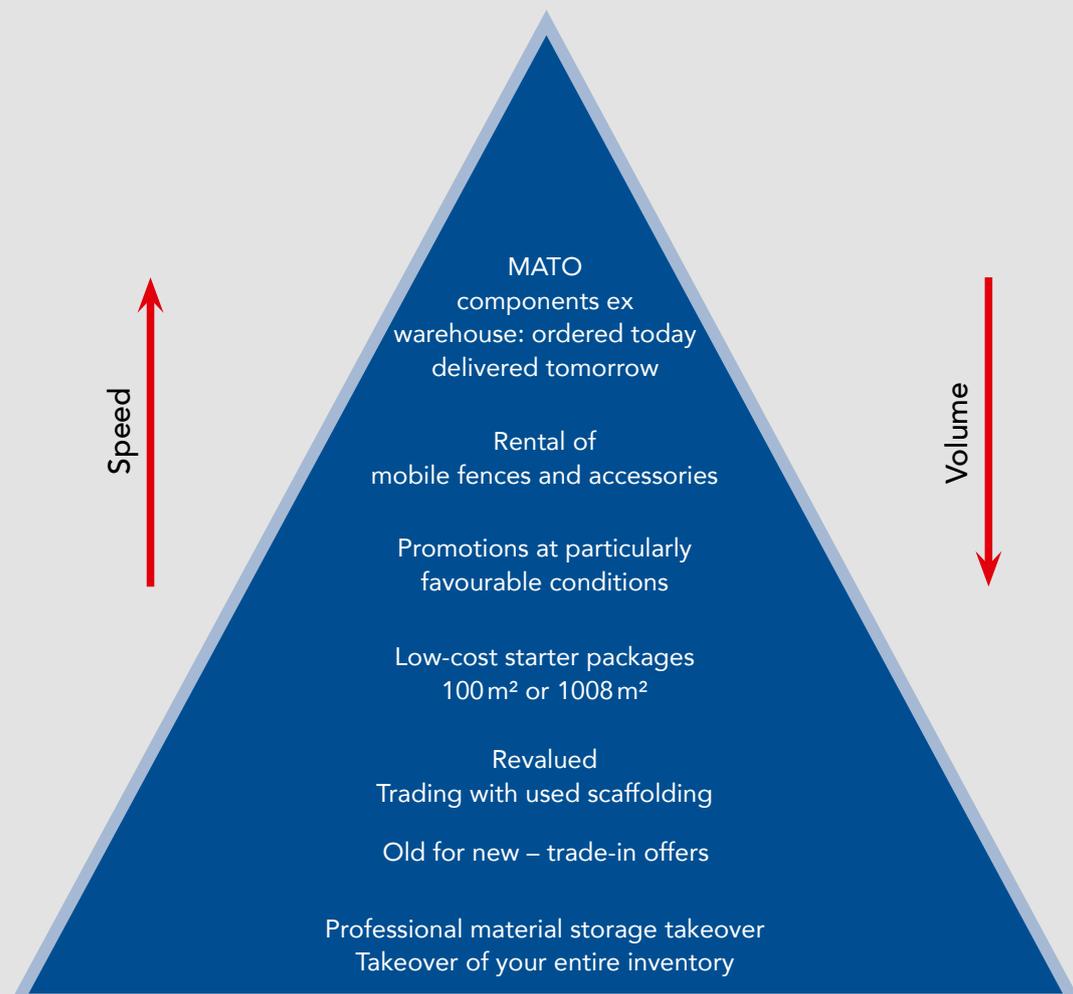

In 1995, Tobler was the first company in the world to develop an extruded platform made of solid aluminium and launched it on the market in 1996. Just one year later, another world premiere followed: the first solid aluminium platform with hatch and ladder.

Since then, year after year, Tobler has developed a wide range of innovations for the construction industry that make your life safer and easier. Our scaffoldings have become better every year thanks to new innovations.

Driven by our ambition to deliver the best products, we will continue to enhance our portfolio, research patentable solutions and continually test new ideas.

We also utilise our expertise to develop alternative product and system solutions with improved characteristics.

Last but not least, you also benefit from our vast range of accessories.

**Faster, safer and nearly gap-free**

The MATO3 all-in-one scaffolding system ushered in a new era of nearly gap-free scaffolding construction with high-tech platforms in a metric system. It is the scaffolding system with round tube support – and practically all you need. With its integrated advanced guardrailing system, the scaffolding builder can safely reach the next level with minimal effort. The high-tech system avoids couplings and raises the bar to a new level in terms of usability, safety and speed.

MATO3 has been perfected both as frame scaffolding system, as well as, system with posts and ledgers. What makes it unique is its compatibility with known modular scaffolds and that it can be

used even for special scaffolding applications such as bridge frameworks.

With its ingenious component interaction and limitless applications, this system takes scaffolding to the next level: MATO3 the ultimate all-in-one scaffolding construction.

**MATO3**

All-in-one  
scaffolding system.

### **The modular System for maximum flexibility**

The MATO8 modular scaffolding system features rosettes at a vertical distance of 50cm.

The practical wedge head system for quick assembly and disassembly facilitates connections and reinforcements in all spatial directions. All MATO8 components are available in steel and – a true novelty – in aluminium!

Applications range from construction sites on difficult terrain, to strutting on the smallest of surfaces, to scaffolding systems subject to high static loads. MATO8 can be used to realise complicated industrial such as structures, towers, stairways, bridging elements, tribunes or even mobile scaffolding applications. Transport, handling and

storage are additional compelling features. MATO8, MATO3, Road Bridge and Light Bridge-beam provide the perfect modular solution for all applications.

**MATO 8**  
Modular  
scaffolding system.

### Above Ground

MATO Connect Road Bridge is the world's only system that can conquer bridge spans of up to 38 m without an additional static "shell" made of modular scaffolds.

Its extreme load capacity and high-speed assembly make it an attractive solution for event applications. Set-up is simple and safe by crane.

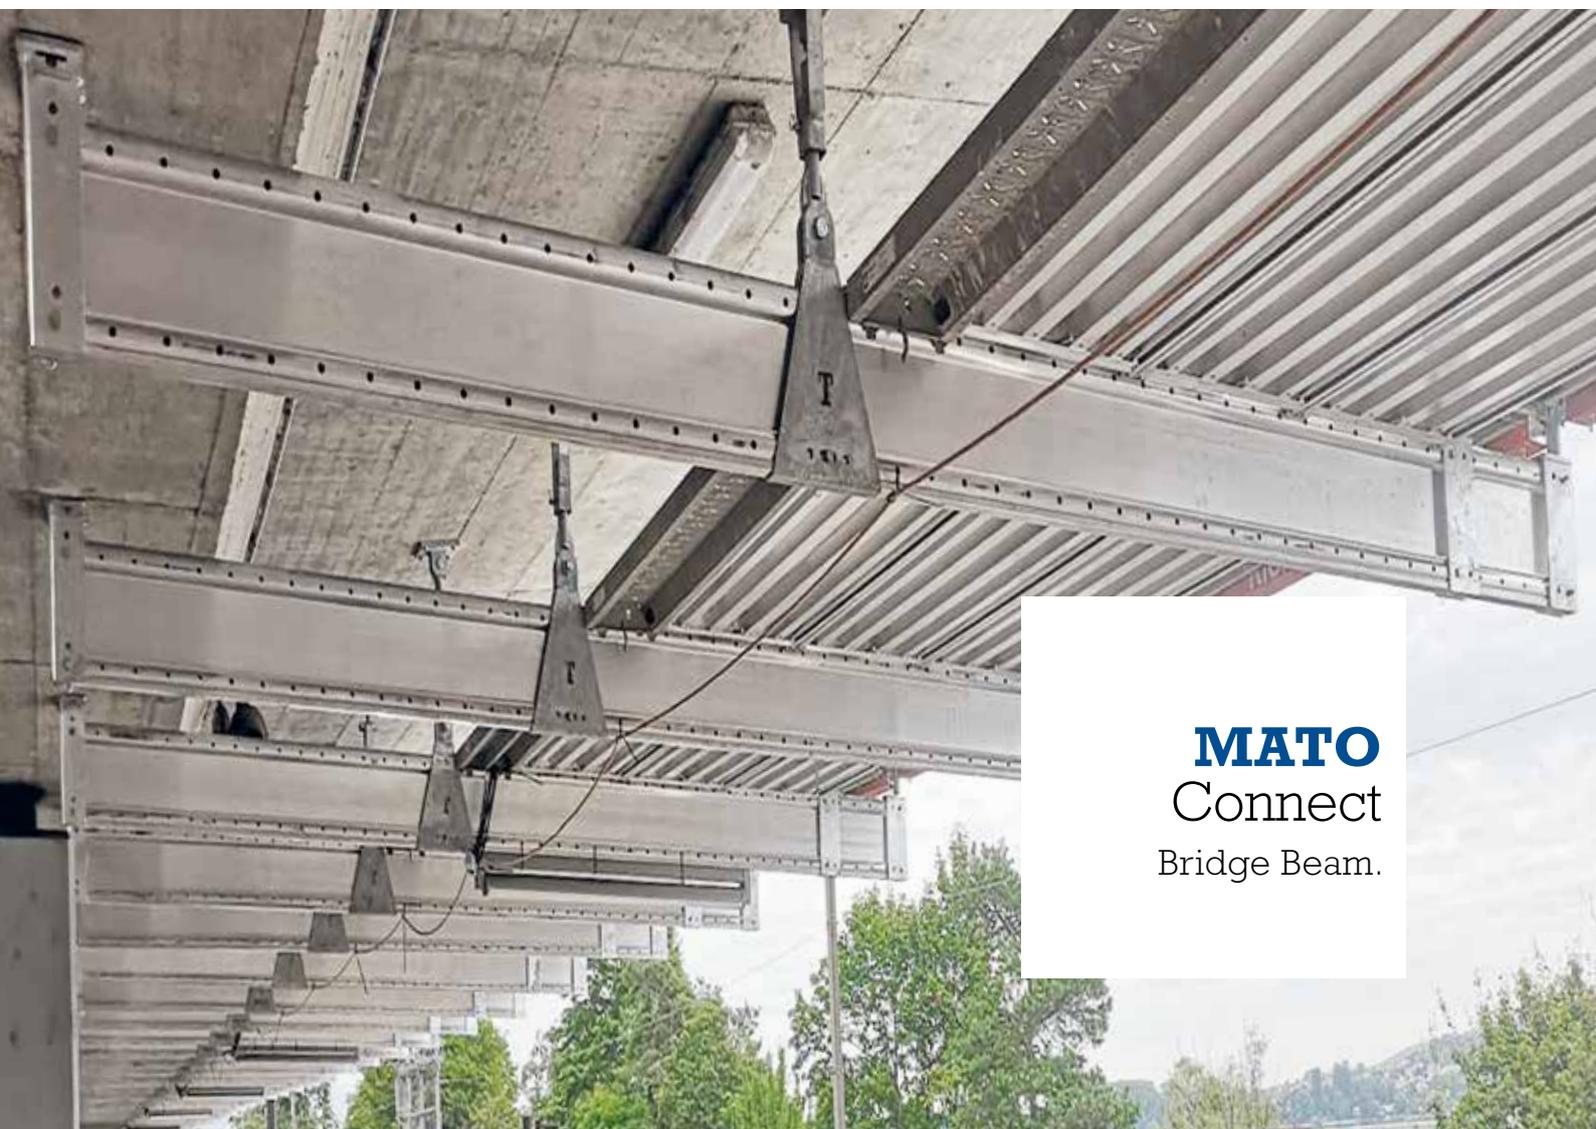

**MATO**  
Connect  
Road Bridge.

### **Lightest in Class**

MATOConnect bridge beams allow to install scaffolding on bridges with greater safety, speed and precision.

The trick: Lightweight beams with special geometry and a clever assembly concept with a patented turning and lowering device. From a safe standing position, the bridge beams are rotated and aligned. The round tube supported platforms are easily mounted on a bridge beam. After that, you can simply and precisely move the bridge beam, including fasteners, to its target position, simply by pushing it. From there, it is fastened to the bridge.

MATOConnect bridge beams are true high-tech products that make life easier for you. They are the lightest in their class with the best static values.

**MATO**  
Connect  
Bridge Beam.

### Starting work on the roof more quickly

MATOPro anti-fall protection offers significant time- and cost-saving advantages. The MATOPro integrated console bracket with its safety railing based on round tubes, together with a stair tower to get access to the roof, are twice as fast and half as expensive as facade scaffolding.

In addition to the Tobler solar console brackets, the console brackets for verge, ridge and parapets also boast special features: Its combination of high strength and extremely low weight is striking.

The lightweight aluminium products with their large adjustment ranges are suitable for all

applications. They can be held and adjusted with one hand and quickly tightened using an impact wrench or scaffolding ratchet.

**MATO** Pro  
Anti-fall  
protection.

### Perfect weather protection

MATOPro temporary roof systems offer the greatest possible protection for roofers and other construction workers. Our entire range of protection systems consists of components that have been tested by renowned testing institutes in accordance with the latest accident prevention regulations.

MATOPro temporary roof systems can be mounted on any commercially available scaffolding system. Their lightweight construction allows for quick and easy installation. They are designed for an extreme span of up to 58m without additional support. This guarantees perfect weather protection for building and civil engineering.

MATOPro temporary roof systems allow you to expedite construction, restoration or repair work after fire incidents.

Our MATOPro walkway roofing solutions offer a further form of weather protection. These are storm-proof and can be mounted on any scaffolding system.

**MATO** Pro  
Temporary  
roof systems.

### Rolling Scaffolding for tough demands

The MATOR rolling scaffolds are available for working heights from 2.00m to 10.20m outdoors and 13.90m indoors. With appropriate anchoring, working heights up to 24m are possible.

MATOR stands for maximum efficiency in use and comprises variants from ECO to PROFI. Up to certain heights, the user can assemble the scaffolding systems by itself and move them on robust casters. In its foldable version, the user can stow MATOR in the tightest of spaces.

The safety of our rolling scaffolding exceeds the requirements EN 1004 2005/EN 1298 1996. Its electrical conductivity is certified by SWISS TS and German TÜV.

All scaffolding elements are subject to strict quality controls.

**MATOR**  
Mobile Scaffoldings.

### **The ideal scaffolding for your construction site**

Scaffolding for construction sites is a significant growth area for the Tobler Group. Safe stair towers and practical construction site access options made of MATO8 modular scaffolding parts allow construction workers and site visitors safe passage to and from the building site.

When access is no longer required, all material can be used in scaffolding construction.

The robust reinforcement scaffolds are available with screw jack base plates or with casters. MATOConnect cable bridge assemblies are unshakable, thanks to flexibly stackable Swiss-Block system modules. Extreme spans and expandability make this concept unique and very economical.

construction sites.

### Stages and tribunes for small and large events

With our MATO3 and MATO8 scaffolding systems as the basis, and with components specially developed for different types of stages and grandstands, you may save a lot of valuable time.

Whether it is a motocross event, a wrestling festival, an open-air event or international arenas, Tobler's components are basic for reliable and economical solutions and have proven themselves in difficult practice.

**MATO E**  
Events.

### **A full range of accessories**

MATOZ represents a huge selection of parts and components from our scaffolding accessories range.

There's almost nothing you won't find here, including options for our own MATO scaffolding systems as well as for most common systems from other suppliers.

The product range includes, for example, platforms, anchoring material, stairs, guardrails, brackets, and also screw jack baseplates, couplers, fittings and much more.

**MATOZ**  
Scaffolding  
accessories.

**And anything else you need for efficient construction**

As your construction supplier, you will find a wide range of products in our portfolio that are needed on every site for safe and cost-effective construction.

- Scaffolding protection nets
- Walkway protection nets
- Safety signs
- Fall arrest personal protective equipment

**Unauthorised access to the scaffolding is prohibited!**

Removal of parts of the scaffolding is prohibited.  
Parents will be held liable for the behaviour of their children.

# Formwork Systems

**Precise – Strong – Fast**

We deliver results that impress. Appearance and technology alone do not guarantee success. That's why Tobler focuses on economical factors. Robust products for optimal handling and fast progress during construction are key.

Wood, steel or aluminium:  
It's your choice!

**Top-quality wall formwork**

Extremely resistant and highly flexible – these are the main features of our wall formwork systems. Due to the full compatibility with other manufacturers, you can supplement your stock with elements from Tobler at any time.

Hot-dip galvanised, equipped with indestructible cast corners and frames made of high steel grade – with Tobler you can count on top quality and a long service life. Power-coating prevents the negative effects of adhesion to concrete.

Concreting platforms and opposing guardrails can be assembled and moved in no time at all.

**Tobler** Top  
Wall formwork.

### The perfect systems solution

Our economical ToblerManu system is the perfect solution for small to medium areas. Squared timber and wooden boards are replaced by the lightest and strongest handset formwork system on the market.

Compared to other handset formwork systems, ToblerManu is the specifically lightest while still absorbing high pressures. It makes formwork more efficient – without the need for a crane.

Work fast and take it easy.

**ToblerManu**  
Handset formwork.

### Quick and precise

With the Master Pro wall formwork from Ringer, we offer our customers the fastest available single-sided operable wall formwork.

Its innovative anchoring system allows you to set the distance of the formwork elements in record time, making this system up to 30% faster than its competitors.

A sophisticated dual sealing system ensures that you won't be dealing with hard-to-clean concrete residue as is the case with systems of other manufacturers.

Tobler **RINGER**

**Master Pro**  
Wall formwork'

### Working safely – with and without a crane

With the Master system from Ringer, you can build wall heights up to 3.3m without needing any extensions. The use of a dimensionally stable, torsionally stiff fine-grain rolled profile for the hot-dip galvanised frame elements achieves high load-bearing capacity with low weight. The Master circular forming plate, connected by UNI-walers make it possible to form curves.

The compatible, powder-coated aluminium variant uses a closed hollow-chamber profile and various handling grips. Elements are available in heights up to 3.00m and finely graduated widths up to 90 cm.

Tobler **RINGER**

**Master**  
Wall formwork

### The crane-independent alternative

Ringer's handset formwork system AL2000, also available in steel, features a thoughtful and compact design. With its hollow-chamber profile, the formwork system can withstand fresh concrete pressure up to 60 kN/m<sup>2</sup>. Its smooth profile is equipped with grips for easy handling.

In addition, this crane-independent application is also compatible with the AluDEK slab formwork system and the DEK Plus slab tables from Ringer.

Tobler **RINGER**

## System 2000

Wall formwork

**Increased efficiency by modular design**

The lightweight ToblerDeck slab formwork system is setting new standards in terms of flexibility and cost-effectiveness. Designed for assembly from below, it can be easily adapted to different floor plans and heights. No add-on accessories are required for slabs with thickness up to 50 cm. Dimensional precision ensures exact positioning and perfect joint alignment. The main advantage: Compared to ToblerFlex and similar applications, this system requires significantly fewer props, less work-time and less space.

Build safely and maximise your profits!

**Tobler** Deck  
Slab formwork.

**Slab tables**

Efficient to assemble, easily movable and highly compact for transport:

Tobler's robust slab tables save precious time.

We carry different variants for your needs:

Simple slab tables on props or optionally with extension frame on folding props.

The electrified Tobler KART accelerates work on large construction sites.

For very tall heights, we offer a high load-bearing scaffolding system to match the slab tables.

**Tobler** Desk  
Slab tables.

### **Maximum flexibility in slab formwork**

In our extensive warehouses in Rheineck, Forel and Sursee you will find high-speed props, trench sprouts, wooden girders, formwork panels made of multi-layered wood, as well as shock- and weather-resistant formwork panels with plastic coating for maximum efficiency. All from Tobler's Flex product line.

We offer everything you need for flexibility in formwork – always at top quality and optimised for efficiency – including our comprehensive accessory range.

**Tobler Flex**

Props, girders,  
panels.

**Girder formworks for individual use**

Visible concrete surfaces, smooth as a table, with sharp edges and precisely positioned anchor holes: For many applications Tobler's wooden girder formwork systems are the top choice. The walers are fastened to the wooden beams in a non-destructive way and at a height that can be flexibly adjusted based on your requirements. Cost savings are not only realised due to well-planned transport and assembly but also because the girders can be reused many times. Foldable concreting platforms guide you safely to the top.

**Tobler** RexGirder wall  
formwork.

### From curved to free-form surfaces

Tobler's flexible circular formwork enables the safe and precise forming of curves. We will be happy to design, produce or procure custom formwork for your funnel-shaped or flowing surface contours. This makes Tobler the ideal partner for long-term cooperation in the field of special formwork and for complex tasks. Many years of experience, a valuable network, and the extensive expertise of our structural and design engineers provide real added value for you as our customer.

**Tobler** Varia  
Circular formworks.

### Expertise for special projects

From bridges to freeway slip roads: Tobler is a good address for special formwork of all kinds and difficult applications. With our product range, we cover almost all applications and offer advantages in economy, flexibility and robustness in many cases.

We look forward to our collaboration!

**Tobler**  
Project  
Special formworks.

### The lightest, fastest and strongest Heavy-Duty Props

The lightweight Tobler Tower heavy-duty supports made of aluminium props speed up your work and reduce effort thanks to a fast-running thread as well as the integrated crushing and fall protection. Whether used as single supports or connected by frames, Tobler Tower is the perfect solution wherever particularly high loads have to be supported at low to medium height – at an affordable price.

Tobler covers all extreme requirements, including extreme loads and heights. Load-bearing scaffolding systems for the highest heights, as well as, shoring props for extreme loads leave nothing to be desired.

**Tobler H**  
Shoring systems.

### Renovation service in Swiss Quality

Regular cleaning and maintenance are essential for a long service life, maximum efficiency and best results.

We offer refurbishment not only for Tobler form-works, but for all common systems from other manufacturers. This ensures that your elements last longer. Frame inspection is also an important safety consideration.

When you're in a hurry – make a pit stop at Tobler.

A photograph of a large industrial machine, likely a lathe or a similar metalworking tool, in a factory setting. The machine is primarily red and grey, with various mechanical components, gears, and a large flywheel visible. The background shows other industrial equipment and a factory floor.

**Tobler Care**  
Renovation.

### **Rental service for your formwork**

Whether you are looking to rent or purchase formwork, props and accessories: We offer both options at attractive conditions.

We help you implement projects in a safe, flexible and cost-effective manner and deliver whatever your construction site requires. Renting is a great way to gain trust in our products and to thoroughly test our innovations. Ask us for a quote!

**Tobler Rent**  
Rental park.

# Tobler Storage

## **Building with heart, head and humour**

Efficiency starts in your warehouse. We provide indestructible, flexible and even movable storage technology – customised to your needs. You can also benefit from our many years of experience and our network of partners in the trade. We only carry carefully selected products from renowned manufacturers. And since we buy in bulk, we can offer you these products at an attractive price point.

### **Building begins with efficient storage and safe transport**

Premium storage for industry, trade and installation services: We deliver added value with outstanding technology.

- Cantilever and pallet shelving
- Stackable lattice and steel boxes
- Pallets and storage racks
- Buffer storage solutions

Whether it's solving tricky static problems or storage on construction sites: We support you with know-how and state-of-the-art software.

**Tobler**  
Storage  
Creating order  
more efficiently.

**Solid, even second-hand**

In our warehouse for second-hand scaffolding and formwork systems you will certainly find many a bargain.

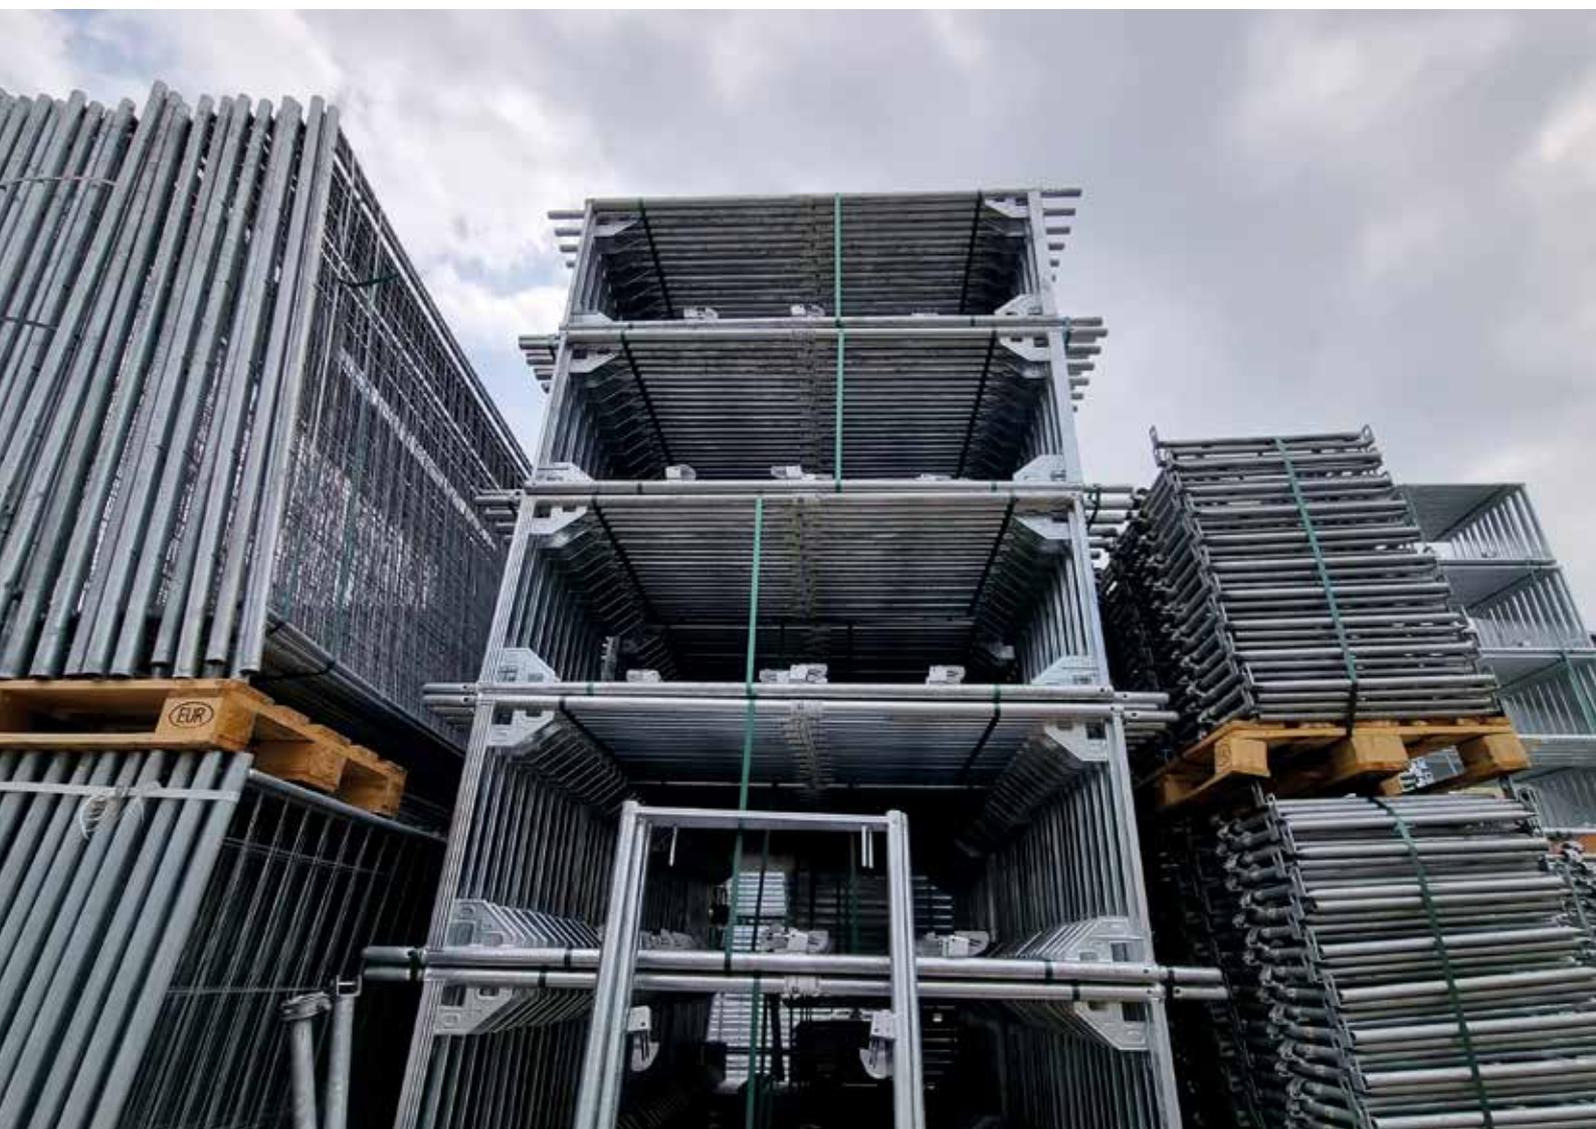

Benefit from ongoing special offers and contact us if you want to exchange your old systems for new ones. We constantly receive many inquiries for second-hand material.

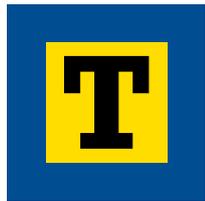

**Tobler**  
Revalued  
Still good  
even when used.

Gain space and get a good price for your current system components that were getting a bit long in the tooth. You will be open to new ideas! We are happy to help you increase your efficiency.

But we also take care of your succession planning and take over entire work yards!
